LANGUAGES

Italian: Native

English: IELTS Academic: Overall Band 8.0

TECHNICAL SKILLS

Programming languages

C, C#, Python, JavaScript, Java, Assembly

Databases

T-SQL, MySQL, PostgreSQL, AWS S3

Frameworks

.NET, Blazor, Node.js, HTML5, CSS3

DevOps

Docker, AWS, Git

OS

Windows, Linux

WORK EXPERIENCE

Freelance Software Developer

Self-employed | Mar 2025 – Present

- Development of custom software solutions for business clients
- Digitalization and automation of business processes
- In-depth requirements analysis
- Ongoing support for system evolution

IT Specialist – Neri S.p.A.

Longiano | May 2023 – Jun 2023

- High school internship
- Business process automation
- Network infrastructure management
- Technical support and training for company employees

PROFILE

Third-year Computer Science and Engineering student at the University of Bologna, with professional experience as a freelance software developer since March 2025. Designed and built a full-stack shift management platform for an Italian private clinic network, digitizing the shift scheduling process for the first time, used by over 650 users across 80 departments in 9 hospitals to manage an average of 6000 shifts per month. Driven by a genuine interest in software architecture and process optimization, with a strong academic foundation and a proven ability to deliver complex projects.

EDUCATION

Bachelor's Degree in Computer Science and Engineering

University of Bologna | Sep 2024 – Present

- Software development, algorithms, databases and web technologies
- Notable results: Weighted average: 27.47/30 · Algorithms and Data Structures: 30 · Object-Oriented Programming, Network Programming, Database Systems: 30 cum laude

Diploma in Computer Science and Telecommunications

ITT Blaise Pascal, Cesena | Sep 2019 – Jul 2024

Final grade: 97/100

- Software & web development, databases, networking infrastructure

PROJECTS

Hospital Shift Management System

Freelance – .NET Blazor, C#, SQL | Mar 2025–Present

- Web application for managing the complete shift lifecycle in a private clinic network
- Features: shift creation and scheduling, digital time-stamping, multi-level approval workflow, and manager dashboards
- Used by both freelance medical staff and permanent hospital managers
- WebAssembly client to Blazor Server communication, deployment via CI/CD pipeline, authentication via Windows Active Directory, TDD development

Crossy Road – OOP Recreation

University of Bologna – Academic project | 2024–2025 – [Link](#)

- Faithful recreation of the mobile game Crossy Road applying object-oriented design principles
- Final evaluation: 30 cum laude

Classmate – Backend

High School Project – Node.js, Docker, REST API | 2023–2024 – [Link](#)

- RESTful API backend for a school-oriented social platform allowing students to upload and share lesson notes
- Designed and implemented the full backend architecture, containerised with Docker for portability
